Hello Stas, Pieter,

In the attachment a request/proposal of the information (need to have and nice to have) available in the new Mixcont Compound program regarding the recipes.

I have not yet access to the program (or do not know how to enter), so I do not know which information is already in it.

The complexity of the document requires a little explanation:

- The build up has the same format as with the ingredients: first column is "fields in Eclipse", second column is "fields in Mixcont", third and fourth columns are values.
- Since we have not yet discussed the appearance of the information in the recipe module of Mixcont, I arranged the information in several display (Display General Information, Display Recipe, Display Properties, Display Procesparameters & Deliveryform, Display Notes and Display Mixingplan). This needs to be discussed and agreed later.
- All fields with black (or grey) text are present in Eclipse and should be present in Mixcont
- All fields with red text are not present in Eclipse but are very nice to have in Mixcont. The amount, however, is quit substantial. The information is about milling parameters and delivery parameters. Having this, would be a big improvement. @Stas: is this possible/acceptable?
- Info in blue fields/lines should enter SAP. The line "to be defined" on the SAP side means that the destination of the info is not yet known.
- Info in the green fields/lines should enter the "stukslijst". If an ingredient has no "artikelstamgegevens" in SAP, the recipe should be blocked from entry in SAP.
- The mixingplan should enter the interface and be remodelled to a readable table (yellow table is example). This has already been discussed and info is retrieved from document "Buildup Mixing Proces.xlsx". @ Stas/Pieter: Any news on the feasibility of this remodelling?

If you have any questions, comments, suggestions, please let me know

Met vriendelijke groet
With kind regards

QEW
