Hello Stas,

### Regarding raw\_material.html

Alle relevant info is there but the first seven lines (code 00605 till 01205) should not have been selected, because they belong to the class C or R. Only class P is allowed to be transferred. After line seven it is OK, all materials with class C are excluded.

Is the table Raw\_Material\_Vendor ready?

### Regarding recipe.html

The additions we have discussed in December will be added to the document today. Pieter will send it. We need to discuss how to display all relevant instructions regarding milling and delivery.

I noticed an error in the workinstructions.

Regarding 00-0-0333 the info in red is missing

time	,temp	,speed 40.0	,sweep	,add	30026,17460,17203;
time 45.0	,temp	,speed 20.0	,sweep	,add	10068,11188,11170,11418,17751;
time	,temp 90.0	,speed	,sweep	,add	11080,30581,17857,17687;
time	,temp 105.0	,speed	,sweep 0.0	,add	
<b>time</b>	<b>,temp 125.0</b>	<b>,speed</b>	<b>,sweep</b>	<b>,add</b>	,ram up,discharge;

Sweep, add, ram up-discharge are actions and only one action per line is allowed. Therefore we regard ram up and discharge combined as one action (the ram up message does not need to be visible)

Is it possible to put this info in a table. Preferably in Mixcont, so that in the (near) future we can use screens to display info directly from Mixcont.

@Pieter: Workinstructions is placed in table recipe\_raw\_material, but I think it should be in table Recipe.

@Pieter: Besides the addition to table Recipe we discussed yesterday, following should be added also:

- Description (recipe name) number of characters preferably 30

- Group (= polymerblok in SAP) number of characters 3 (as it is now)
- Groupname (description of group) number of characters 20
- Shelflife in days

@Stas: Of the above mentioned items, only Groupname is missing in html document

### Regarding recipe\_raw\_material.html

The html of the previous mail was OK, but in this one most info is missing. Regarding compound 00-0-0000 all is correct but all other compounds 00-0-0001 to 00-0-0004, info is missing.

### Other questions:

Is there any progress on the interface table Vendor?

Is Mixcont Compound ready to receive the Vendor information as discussed (database and display)?

The subsequent data has been put in SAP. Preferably the first transfer would be Vendor info from SAP to Mixcont. We then can make the necessary changes in the ingredients before we transfer it all to SAP.

Met vriendelijke groet  
With kind regards
