Good morning Stas, Andrei,

It appears that under my account (mcsap_sap) I don't have the authorisations to make changes to the database tables in the MCSAP database. Can you do this or give me permissions?

I have run the interface and imported the Vendors and VendorContacts from SAP into the Interface tables, so you can test if the data can be picked up in the Mixcont application. ItemPrices cannot be uploaded due to foreign key constraints.

Best regards,

Pieter Markus CPIM CIRM, Business Unit Manager

Hello Pieter,

We will do the required changes to the database after we all agree about the database structure.
Our exporting program is developed in accordance to the current database structure which was mutually agreed
on the meeting so any changes in it could mean lots of changes.

Why cannot the data be exported to the "item_price" table? Is it not possible to ignore records which throws
foreign key exception and continue with those which exists. Or maybe you could first make an export from
"raw_material" table to SAP and then try exporting to the "item_price" table again.

Yes, we saw the exported data to the "vendor" & "vendor_contact" tables and will perform tests soon. In the
"vendor_contact" table is only 5 records is it correct?

Best Regards
Andrei Brassas
