Dear Cor,

Please clarify the items from Raw_Material interface table:

Preffered Location

FamilyItemNumber

FamilySubGroup

Please tell, if know,

1. in which eclipse table they are or names of them

2. Give real examples of values   like "AA" or whatever as these values can be found in database right now, so we can find them.

As for location there are two locations right now:

In table MCCPWAERE as Location1 where no values

And in Info as "Warehouse_location" not many values exists

Kind regards,

MixCont support team

Hello Stas, Andrei,

Preffered Location is named as "Lokatie" and it is one of the free fields in Eclipse (defined as lokatie).

All current ingredients have a value, but obsolete ingredients not always.

Values are Bunker (K), Roetzolder (C4), etc.

We only use this one for Warehousing, so probably the second one you mentioned.

FamilyItemNumber is Groupname as mentioned in document "Ingredient Interface Mixcont-SAP.xls" in field B12. This does not exist in Eclipse. But we discussed this early in the development of Mixcont Compound.

By the way: the name is wrongly spelled as Groepname (Sorry)

The Groupname is linked to Group (GRP in Eclipse and GroupTechnologyCode in SAP)

FamilySubGroep is "Polymeerblok" in SAP and is only relevant for recipes. There it is the same as "Groep" (row 11 of Recipe Interface Mixcont-SAP.xls).

So, for ingredient-part of the interface, this one can be left out.

Hope this will clear it.

If you have any questions, please let me know.

I will check my mail during this holiday on daily basis.

Kind Regards,

Cor Gringhuis
